

Transparent .png Image on command buttons

- 1) Draw an image on your form using image controls . Close the explorer window that pops up for now.

- 2) Under the image's properties, change its picture type from Embedded to Shared.

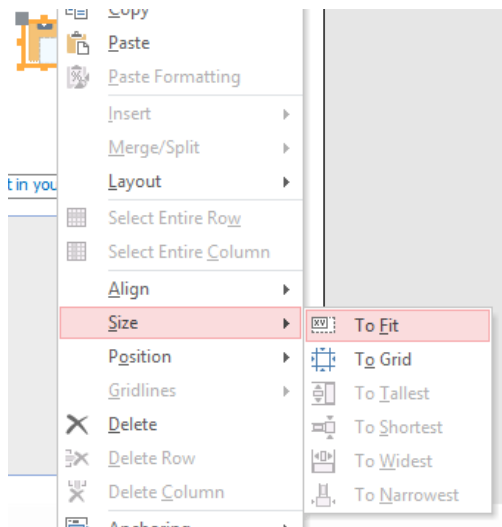

- 3) Next, under Picture select (none) and file explorer will open. Find your transparent .png and select it.

- 4) Next, go back to the images properties and change its picture type from Shared back to Embedded.

- 5) Now right click your image and size to fit.

- 6) Last, You can delete the image you created you no longer need it.

go to your ribbon/Design  and your image will be located there. Now if you had a button you can select your button then go to the Insert Image and select your image and it will populate on your button under its properties "Picture".
